

LaserJet M1319f MFP

vs. Brother MFC-8220

Print sooner from powersave mode

Faster on-demand printing — Instant-on Technology enables your HP LaserJet M1319f MFP to warm up and print up to 5 pages from powersave mode before the Brother MFC-8220 can even finish warming up. This advantage is especially noteworthy when you consider that most printers are usually in sleep mode when a user submits a job for printing, according to research conducted by InfoTrends.

Energy efficient — The advanced, fast-heating ceramic element within your HP LaserJet M1319f MFP's Instant-on Fuser consumes up to 44% less energy per year than the conventional fuser Brother builds into the MFC-8220 — an estimated 66 kilowatt hours annually vs. 117 kWh, respectively. Your HP LaserJet also meets the new, more strict ENERGY STAR[®] rules that went into effect April 1, 2007.

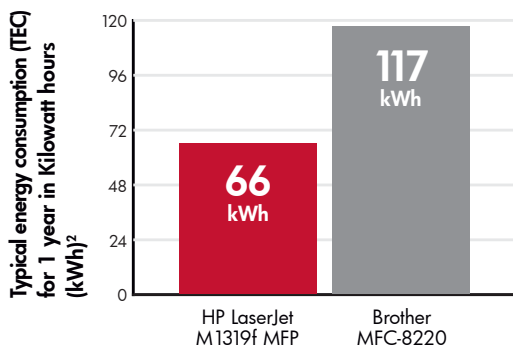

Virtually maintenance free — Your HP LaserJet M1319f MFP employs an innovative print cartridge that incorporates the toner supply, imaging drum, primary charge roller, and developer into one single, integrated unit you can easily replace with no mess. The Brother MFC-8220 uses a complex 2-piece system (separate toner cartridge and imaging drum) that forces users to stock and replace an extra consumable.

Color scanning with HP — Unlike the Brother MFC-8220, your HP LaserJet M1319f MFP features color scanning with resolution up to 600 x 600 dpi and 24-bit depth. Furthermore, Brother does not offer scan-to-PDF capabilities like HP.

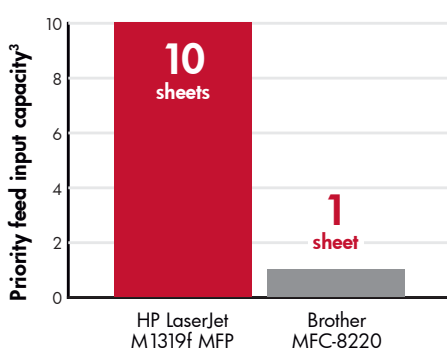

Unsurpassed print and copy quality — Your HP LaserJet M1319f MFP delivers true 1,200 x 1,200 dpi printing compared to 2,400 x 600 dpi for the Brother MFC-8220. Likewise, your HP LaserJet offers higher resolution copying — 600 x 600 dpi vs. 300 x 600 dpi for Brother.

Better paper handling — You can stock up to 43-lb. bond in your HP LaserJet M1319f MFP's paper trays. The Brother MFC-8220's standard paper tray only accepts up to 28-lb. bond. And Brother's priority feed only accepts a single sheet at a time, while the HP priority feed allows you to feed up to 10 sheets at a time, so you spend less time reloading.

Consume 44% less power

Less manual feeding³

1. Based on internal HP testing.
2. Testing was performed on a single unit of each product using the Energy Star[®] program's Typical Electricity Consumption (TEC) method. Test data was extended 1 year. Actual usage may vary. Individual product configurations can affect power usage.
3. Based on the manufacturers' published product specifications.
