

# LaserJet M1522nf MFP vs. Dell 1125

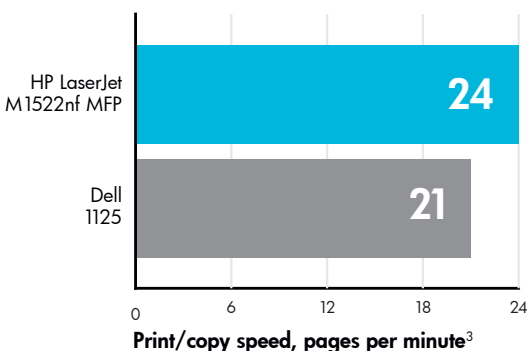

## Print sooner from powersave mode

## Copy/Scan multiple originals faster

## Print and copy faster with HP

**Faster printing and copying** — Your HP LaserJet M1522nf MFP offers faster print and copy speeds — up to 24 pages per minute vs. up to 21 ppm for the Dell 1125. HP also copies faster from the auto document feeder — up to 16 ppm vs. only up to 11 ppm for Dell.

**Print and copy sooner from Powersave** — Instant-on Technology lets your HP LaserJet M1522nf MFP warm up and print up to 5 pages from powersave mode before the Dell 1125 can even finish warming up. This advantage is especially noteworthy when you consider that most printers are usually in sleep mode when a user submits a job for printing, according to research conducted by InfoTrends.

**Superior print and copy quality** — Your HP LaserJet M1522nf MFP offers higher optical scan resolution — 1200 x 1200 dpi vs. only 600 x 600 dpi for the Dell. The HP also delivers 1,200-dpi-effective printing and copying compared to 600 x 600 dpi for the Dell 1125, which means higher resolution prints and copies.

**Superior scanning and ADF technology** — When scanning images with depth like the interiors of books or magazines, your HP LaserJet M1522nf MFP can yield better results because the HP's CCD scanner has a greater field of focus than the Dell 1125's CIS scanner, which may lose some text and/or details. And be sure to evaluate ADF paper feeding reliability — HP internal testing has found that the LaserJet M1522nf MFP ADF feed mechanism experiences fewer multi-pickups and paper jams in the ADF than the Dell 1125.

**Virtually maintenance free** — Your HP LaserJet M1522nf MFP employs an innovative print cartridge that incorporates the toner supply, imaging drum, primary charge roller, and developer into one single, integrated unit you can easily replace with no mess. The Dell 1125 uses a complex 2-piece system (separate toner cartridge and imaging drum) that forces users to stock and replace an extra consumable.

**Greater compatibility** — The Dell 1125 is a host-based device. Thanks to HP PCL6, HP PCL5e, and HP PostScript-3 emulation, your HP LaserJet M1522nf MFP offers broader compatibility, faster return-to-application time, and less network traffic.
