Ink Cartridge Recycled Content

HP utilizes recycled plastic resin (minimum 95% post-consumer content) in the manufacture of select cartridges with PET plastic housings. Where recycled PET is utilized, it comprises 50% to 75% of the cartridge's total plastic weight, or approximately 40% - 60% of total cartridge dry weight. Use of recycled plastic resin varies by model and over time, based on regional manufacturing strategies and availability of recycled plastic that meets HP's product quality and cost requirements.
