Toner Cartridge Recycled Content

HP utilizes post-consumer recycled plastics from HP Planet Partners return and recycling program in the manufacture of selected original HP LaserJet print cartridges. While the percent of post-consumer recycled plastic in different print cartridges varies over time, the post-consumer recycled plastic can provide up to 25% by weight of the newly molded plastic material for certain representative HP LaserJet print cartridges. As of December 2007, HP LaserJet print cartridge product line contained, on average, 3.5% by weight of recycled content in the form of requalified parts and post-consumer recycled material.
