Gary Cutler is vice president and general manager of Hewlett-Packard's Edgeline Technologies business unit. He is responsible for research and development, as well as business and manufacturing strategy for Edgeline Technology. Edgeline imaging systems and components are integrated into HP business imaging products, industrial printing applications, and solutions for the photographic industry.

Gary began his career with HP in 1981 as a research and development (R&D) engineer in Corvallis, Oregon, making contributions to several HP products, including compilers, operating systems and calculators. In 1984, Gary accepted an assignment at the Vancouver, Washington site, working on scanning and printing products. He was promoted to R&D project manager for systems drivers in 1986 and assumed responsibility for driver development for both Window and Macintosh printer applications in 1989.

Gary was named Software Lab manager, and division R&D manager in 1993 and 1995, respectively. He became division manager in July 1997 and was named an HP vice president in August 2000.

A native of upstate New York, Gary received his undergraduate degree from the University of New York and his master's degree in mathematics and physics from the University of Vermont. He also did post-graduate work in mathematics at Rensselaer Polytechnic Institute in Troy, New York. Prior to joining HP, Gary taught college-level courses at the University of Vermont.
