

HP Indigo UV Coater

Overview

The new HP Indigo UV Coater is an advanced, near-line, user-friendly device for commercial sheetfed HP Indigo presses that enables print service providers and photo service firms to protect and improve the aesthetics of their digital printing output. Designed for cost-effective production in short-run production environments, the HP Indigo UV Coater protects printed materials against damage from finishing or mailing systems, and also provides a degree of resistance to water and solvents. Gloss, matte and satin finishes possible with the coater extend the ability to add high-value appeal on HP Indigo-printed materials.

Fast throughput of up to 4,000 sheets per hour enables support for multiple HP Indigo presses. Ideal coating applications include high-quality direct-mail, photo books, calendars, greeting cards, marketing collateral and book covers.
