

# HP Business Intelligence Solutions

Connected intelligence for better business outcomes

In the new era of business technology, success is measured in only one way: business outcomes. Today, information is viewed as a true strategic asset for companies. Having access to real-time information that is integrated from many different sources, such as operations, finance and customers, will allow companies to make the right decisions and take the right actions to drive value for the business. HP Business Intelligence Solutions empower customers to maximize the use of information and strengthen their competitive advantage.

# **HP Business Intelligence Solutions**

HP brings together a portfolio of services, software, hardware and partner technologies to create business intelligence solutions that allow companies to rapidly make better, more informed decisions for competitive advantage.

HP Business Intelligence Solutions connect the information scattered across an organization, reconciling data silos and allowing the knowledge gained to flow across a business. HP Business Intelligence Solutions can help customers:

- Optimize business performance with the ability to accelerate and improve decision making while reducing cost.
- Capitalize on customer relationships by creating a single view of customers across lines of business to gain insight on customer experience and improve customer satisfaction.
- Maximize productivity by providing a consistent and flexible approach to managing information.

## **HP Business Intelligence Consulting Services**

HP Business Intelligence Services is a world-class consultancy practice dedicated to business intelligence with a full range of services, including strategy and program management, information quality, information integration and information delivery.

HP Business Intelligence Consulting Services encompass:

- <u>BI Strategy and Management Services</u> bring together technical and business aspects of a client organization to conduct the detailed planning and prioritization needed for an effective business intelligence program
- <u>Data Integration and Data Warehousing Services</u> build a solid foundation for sharing data across an organization through assessment of a company's data warehouse initiatives and indentifying areas for improvement
