HP ProCurve Fact Sheet

HP ProCurve standards-based networking solutions enable customers to improve the efficiency of their networks and adapt to the changing needs of users, applications and organizational objectives. In today's economic climate, enterprises realize the value of a flexible network infrastructure designed to protect investments. Customers that have been leery of the financial stability of other networking vendors are turning to HP ProCurve, which guarantees its hardware with the security of the HP ProCurve Lifetime Warranty.

HP ProCurve helps customers change the economics of business technology by:

- Backing its wide range of open, standards-based networking solutions with the HP ProCurve Lifetime Warranty, eliminating costly maintenance contracts.

- Reducing energy costs up to 45% compared with industry averages (according to Miercom[1]) by turning off power to ports when not in use.

- HP ProCurve's new data center networking solutions enable customers to achieve higher server utilization rates by saving time and maintenance through workflow automation, while also reducing data center power and space requirements.

- According to IDC research[2], customers can reduce wireless LAN total cost of ownership by $77,000 per 100 users by deploying an HP ProCurve unified wired/wireless infrastructure.

- HP ProCurve's entire range of LAN switching products features ProVision technology, which unifies the network infrastructure, centralizes management and simplifies overall maintenance, leading to reduced operating costs.
