

Riverbed

Company

Riverbed is an IT infrastructure company offering a family of wide area network (WAN) optimization solutions that provide customers an order of magnitude more value from existing investments in networking, storage and applications. Riverbed eliminates the need to sacrifice IT strategy while cutting budgets.

Riverbed products are designed to address the constraints of distance and time, arming workers with faster application performance whether they are using applications hosted in a data center, working in a remote office or using a laptop. With Riverbed, IT can adapt more quickly and support today's fluid, fast-paced and increasingly dispersed organization without requiring significant upgrades in storage, network bandwidth or equipment. Riverbed helps squeeze more value from all IT initiatives, making possible a new level of IT effectiveness while managing costs.

Partner ONE application

Riverbed will integrate its Riverbed Optimization Software, which powers its Steelhead product family, with the HP ProCurve ONE Services zl module – a blade for the HP ProCurve Switch 5400zl and 8200zl series that consolidates partner applications onto a common platform, enabling reduced costs and optimizing rack space. Riverbed WAN optimization running on HP ProCurve infrastructure provides customers with a next-generation data center solution that allows chief information officers to reconcile the conflicting demands of serving centralized IT to distributed employees with ever-increasing data management requirements.

The joint solution is expected to be available in the second half of 2009.

Quote

"Efforts such as IT centralization, virtualization and data center consolidation are often motivated by an effort to close that gap, but often introduce performance issues at remote locations that affect the business bottom line," said Eric Wolford, senior vice president, Marketing and Business Development, Riverbed. "The inclusion of the Riverbed Optimization Software in the HP ProCurve ONE program gives customers moving to next-generation data center models a solution that can reduce costs and the complexity of network management, while improving application performance and employee productivity."

About Riverbed

Riverbed Technology is a technology and market leader in WAN optimization solutions for companies worldwide. By enabling application performance over the wide area network (WAN) that is faster than what users experience today, Riverbed is changing the
