Help **SECURE, SIMPLIFY** and  
**SAVE** on the PRINTING of  
your **HIGH-VALUE** documents.

## HP and TROY Secure Document Printing Solution

Many corporations, government agencies and other organizations expose their high-value documents—prescriptions, contracts, official documents and certificates—to fraud through unauthorized photocopying, alteration or counterfeiting. Plain paper documents are completely exposed to these types of fraud. Preprinted security paper offers some protection, but it's expensive and labor intensive. Your existing laser printers may not have the capability to add anti-fraud security features to your documents or it may be impractical to upgrade them for security printing. So why not just add security features to your print files before they're routed to the printer?

### What if you could...

**Save** your organization time and money by printing high-value documents on plain paper or by adding new security features to pre-printed security stock paper?

**Protect** your organization from loss, censure or liability by adding proven fraud prevention features to your documents?

**Print** high-value documents with security features at a single location, or anywhere on the network using HP enterprise-class PCL5 LaserJet printing devices at a single location, or anywhere on the network?

### Solution at a glance

**The HP and TROY Secure Document Printing Solution enables you to use your HP enterprise-class PCL5 LaserJet printers and MFPs—and plain paper—to print high-value, black-and-white documents with anti-fraud security features.**

Or you can add proven security features to your documents printed on security forms paper. The server-based application lets you define settings for security printing queues, adding anti-fraud features to print files before they are routed to the printer:

**Copy-evident pantograph**—reveals a special pattern when any unauthorized copying or scanning occurs.

**Variable data watermark**—prints unique user-defined data across the back of each document to protect against alteration.

**MicroPrint optimized for laser printing**—reveals secondary authentication under simple magnification.

**Intelligent warning box**—allows first line inspectors to easily verify document authenticity.

**HP and TROY Secure Document Printing Solution can provide important operational benefits that save time and money:**

**Flexible server-based deployment**—enables installation on existing networks with PCL5 laser printers connected.

**Plain paper printing**—reduces or eliminates dependency on expensive pre-printed security stock paper and the associated time spent on chain-of-custody management.

**Workflow simplification**—streamlines the entire security document print process, and eliminates the need for locking paper trays or dedicated security printers, and the added management time.

**Certified by HP**—provides confidence in the quality and ease of implementation of the TROY solution.

# HP at work around the world

A major Southeastern U.S. healthcare system needed to securely issue prescriptions directly from its two electronic medical record (EMR) systems: one for its hospitals and another for its clinics. Secure printing across the entire printer network was vital to reduce the risk of fraud and meet stringent government regulations. It needed to print prescriptions on existing devices spread throughout multiple facilities. In addition, its clinic management selected small footprint laser printers—the HP LaserJet 2055N—because of space constraints.

The HP and TROY Secure Document Printing Solution was selected to meet this challenge. The unique flexibility of this software application allowed the IT staff to easily configure the desired print queues for secure prescription printing. Now the organization can print government compliant prescriptions at any printer on the network, avoid unnecessary costs or complex logistics, and stay in compliance.

## Why HP?

HP is a global leader in imaging and printing solutions for large organizations. HP offers technical expertise, and reliable products and solution sets that allow customers to benefit from:

- Consulting services, including procurement, installation, management and support that can be customized to enhance your organization's effectiveness
- Relationships with industry-leading solution providers
- Powerful solutions to optimize your environment, improve the bottom line and help the planet

## How do you get started?

Contact your local HP representative to:

- Set up a workshop with HP to assess your specific business needs.
- Establish a plan to implement the best solution for today and into the future.
- Identify an environmental approach that can help your company save money.

To learn more, visit [www.hp.com/large/ipg](http://www.hp.com/large/ipg).

## HP three-part approach

HP works with you to assess, deploy and manage an imaging and printing environment tailored to meet your business needs, while helping you reduce costs, conserve resources and simplify document-intensive processes.

### Optimize infrastructure

HP can help you achieve a balance between your total cost of printing and your needs for user convenience and productivity.

### Manage environment

Working together, HP can help you maintain your optimized infrastructure while improving business efficiency and tightening security.

### Improve workflow

By streamlining your document-intensive processes, HP can help you deliver a more efficient environment for capturing, managing and sharing information.
