

## HP-UX 11i v3 March 2010 Update

---

### Overview

The March 2010 update to HP-UX 11i v3<sup>(1)</sup> includes new features and enhancements that help organizations improve the management efficiency, security and virtualization capabilities of their mission-critical UNIX operating environments.

New benefits include:

- Improved energy management with [HP Insight Control power management 6.0](#), which graphically monitors and administers consumption. This enables clients to improve power and thermal planning using policy-based controls.
- Simplified provisioning of servers, storage and networking with [HP Insight Dynamics Infrastructure Orchestration](#). This feature provides reliable infrastructure provisioning, best-practice templates and seamless integration with existing data center processes.
- Increased server flexibility, availability and service level agreement (SLA) management with [Online VM Migration](#), which enables virtual machines (VMs) to be moved without service interruption between servers and hardware partitions.
- Enhanced security with the first commercial UNIX operating system environment to achieve [EAL4+ Common Criteria certification](#) with the COTS Compartmentalized Operations Protection Profile (CCOPP). This certification is the highest security standard for commercial off-the-shelf (COTS) operating systems.

### Enhanced virtualization capabilities

Integrity Virtual Machines 4.2 introduces new manageability features for HP-UX 11i v3, including automatic memory reallocation for increased resource utilization and flexibility. This provides easier management of virtual storage and the ability to temporarily stop and start a VM. Additional integration of Integrity VM and Serviceguard Solutions increase availability of virtualized environments while at the same time improving simplicity, deployment and management.

The new HP-UX 11i v3 update delivers new streamlined management tasks including:

- Faster backup and recovery with updated [Logical Volume Manager](#). This enables better availability and performance for storage management.
- Increased system reliability and consistency using the new automatic synchronization of operating environment images with Dynamic Root Disk (DRD).
- Enhanced productivity by reducing the time necessary to perform routine administrative tasks using Software Assistant. This feature automatically flags patches instead of having to manually research and compare data.

### **Pricing and availability**

HP-UX 11i v3 is available immediately worldwide with a U.S. list price starting at \$1050 per socket, which represents up to a 50 percent software price reduction per core.<sup>(2)</sup>

With the introduction of the new HP Integrity systems, clients will be able to purchase HP-UX software on a per-socket licensing basis as opposed to per core. This simplifies software licensing making it easier to manage and procure. The licensing model continues to be per core on the previous generation of Integrity servers.

In addition, HP continues to provide a strong software investment protection license trade-in program.

Clients worldwide can now download HP-UX releases as an alternative to ordering physical DVD kits. The e-Delivery program enables clients to obtain their purchased software faster and saves over 150 tons of packaging per year.<sup>(3)</sup>

More information about the March 2010 update to HP-UX 11i v3 is available at [www.hp.com/go/hpux11inow](http://www.hp.com/go/hpux11inow).

- (1) HP-UX 11i v3 delivers functional releases every six months. Previously these updates were numbered, i.e., Update 5, released in September 2009. Updates are now referred to by month and calendar year. The March 2010 Update discussed here was previously referred to as Update 6.
