HP Speeds and Simplifies Virtualization; Delivers Path to Cloud Computing

New HP VirtualSystem for Microsoft enhances development, deployment and management of IT

SINGAPORE, Oct. 18, 2011 – HP today announced HP VirtualSystem for Microsoft® to help clients speed application implementation and eliminate complexities of IT management to meet the growing demand for IT applications and provide a foundation for cloud computing.

HP VirtualSystem for Microsoft is a comprehensive, integrated technology stack—spanning hardware infrastructure through operating environment and applications. It reduces the complexity of deploying and managing virtualized environments. It is the latest solution resulting from HP and Microsoft’s $250 million Infrastructure to Application (I2A) initiative announced in January 2010.

The deep integration of HP and Microsoft technology provides the performance and flexibility to host applications, such as Microsoft SharePoint, Microsoft Exchange Server and Microsoft SQL Server. Integrated management based on HP Insight Control and Microsoft System Center ensures visibility into the health and performance of the solution hardware, operating systems and applications.

“Enterprise applications often span multiple servers and locations, making technology deployment complex and creating a barrier to cloud computing,” said Paul Miller, vice president, Systems and Solutions, Enterprise Servers, Storage and Networking, HP. “With HP VirtualSystem for Microsoft, clients can run popular applications like Exchange Server and SharePoint in simplified virtualized environments so they can drive greater efficiency and easily transition to open, hybrid cloud computing.”

“Microsoft and HP co-engineered HP VirtualSystem for Microsoft to give customers a turnkey virtualization solution and to accelerate their journey to private cloud,” said Ed Anderson, marketing director, Servers and Tools Business, Microsoft.

HP VirtualSystem for Microsoft is built on the same architecture as HP

News Advisory

CloudSystem, enabling clients to seamlessly deploy private, public and hybrid cloud environments. It also aligns with Microsoft’s Private Cloud Fast Track specification to deliver standardized, cost-effective deployments, reduce risk of un-planned downtime and improve performance for clients.

HP VirtualSystem for Microsoft integrates Windows® Server Hyper-V, Microsoft System Center, HP ProLiant and HP BladeSystem servers, HP Insight software, HP Networking solutions, and HP Converged Storage.

The new solution expands HP’s Converged Systems portfolio, which includes HP AppSystems to help clients optimize the performance, reliability and availability of some of the industry’s top business applications including Exchange Server and SQL Server.

The HP and Microsoft global strategic alliance is one of the longest standing partnerships in the industry. Together the companies help clients around the world improve services through the use of innovative technologies. With more than 25 years of market leadership, HP and Microsoft collaborate to deliver integrated solutions from desktop to data center. More information is available at www.hp.com/go/microsoft.

Pricing and availability

HP VirtualSystem for Microsoft is available worldwide today starting at $175,500 and includes HP Converged Infrastructure, factory integration and three years of HP Support Plus 24. Organizations can leverage existing licensing agreements for Windows Server and Microsoft System Center or purchase Windows Server from HP.
