

HP VirtualSystem for Superdome 2/HP-UX Accelerates Deployment of Virtualized, Mission-critical Environments

Overview

Virtualization is an important factor in improving an organization's agility and speeding innovation. The ability to dynamically optimize resources for critical business needs enables IT to rapidly address changing customer demands, while driving down costs through consolidation.

However, leveraging virtualization technology continues to be a time-consuming and labor-intensive effort, resulting in unnecessary complexities and sky-rocketing administrative costs. The new [HP VirtualSystem for Superdome 2/HP-UX](#) is an integrated turnkey virtualization solution that can be easily deployed and managed, for rapid return on investment (ROI).

Speed and simplify mission-critical virtual environments

Based on [HP Converged Infrastructure](#), HP VirtualSystem for Superdome 2/HP-UX enables clients to dynamically virtualize any workload regardless of size, scale or criticality.

It is the industry's first preconfigured, mission-critical UNIX solution to offer converged hardware, virtualization software and system management, as well as support services, to speed deployment, in many cases, within days instead of weeks.⁽¹⁾

The system utilizes the resiliency and scalability of [HP-UX 11i v3](#) and [HP Integrity Superdome 2](#), as well as [HP 3PAR Storage](#) to support mission-critical workloads. In addition, HP virtualization technologies enable clients to safely and securely isolate multiple environments on the same server, while resources are dynamically adjusted per changing workload requirements. The new system also simplifies the consolidation of legacy HP 9000 applications.
