

Paul Santeler

Vice President and General Manager, Hyperscale Business Unit, Industry Standard Servers and Software
Hewlett-Packard Company

Paul Santeler is vice president and general manager of the Hyperscale Business Unit within the Industry Standard Servers and Software business at HP. In this role, he is responsible for accelerating HP's growth with the emerging independent cloud and web 2.0 service providers and high-performing computing segments. He is chartered with bringing innovative solutions to market and driving intellectual property into HP's supply chain, services and outsourced design manufacturer partners.

Santeler's career in the technology industry spans more than 30 years, including 15 years at HP and Compaq from 1989 to 2004, where he held key executive positions within the desktop, HP ProLiant server and management software businesses. For the past three years, Santeler served as vice president and chief technical liaison at AMD, where he provided technical strategy, communication and management oversight for the overall HP account. Prior to AMD, Santeler was Foxconn's vice president of North America operations running the region's factories and desktop outsourced design manufacturer business.

Santeler has a Bachelor of Science in electric engineering from Rensselaer Polytechnic Institute in Troy, N.Y.
