

Authenticate, safeguard, secure

HP Access Control Secure Authentication helps safeguard healthcare information at the point of care

Extend security protocols to printed material

Your healthcare organization faces the challenge of protecting and controlling the print and distribution of patient information. You need a solution that increases security without expensive, complicated implementation that staff and clinicians resist. Provide clinical care teams with a secure and flexible way to access devices and print jobs to help them meet compliance regulations and privacy mandates at the point of care—and to help you restore control and reduce the costs of using imaging and printing resources.

Help protect patient information that passes through your networked imaging and printing devices with robust authentication features that integrate with existing network credentials, including LDAP and Active Directory. Use HP Access Control Secure Authentication to increase document security by requiring user authentication at the device.

What if you could...

Enhance the security of networked printers and MFPs by easily authenticating devices and users?

Provide users with a single authentication solution that supports a wide variety of proximity card protocols?

Offer mobile or remote clinical care workers with the ability to access print wherever they need to within the healthcare ecosystem?

Reduce IT support costs while enabling 7x24 hour availability?

Support organizational security and privacy policies?

Solution at a glance

Enable your healthcare organization to stop sensitive documents from going unclaimed, and prevent unauthorized use of devices—all while providing local, mobile, and remote users with convenient authentication options that enable them to print virtually wherever and whenever healthcare happens¹. Securing imaging and printing devices can be virtually seamless—HP Access Control Secure Authentication offers a variety of authentication options, including HP proximity card readers, alpha-numeric personal identification codes (PIC), personal identification number codes (PIN), and smartcards. Easily bring imaging and printing devices up to organization security standards. Reduce costs and meet environmental goals by helping to eliminate

the unwarranted use of devices. And, when you deploy HP Access Control Secure Authentication through an HP Managed Print Services agreement, the solution supports not only HP single-function printers, MFPs, and networked scanners, but selected imaging and printing devices from Canon, Lexmark, Ricoh and Xerox as well, so you can gain these benefits with your current asset mix.

Solution features

Authenticate with ease via a variety of options—Provide easy authentication directly at the device, using a single authentication solution. HP proximity card readers eliminate the hassles of using logins and long passwords, and can be programmed to read two proximity card protocols simultaneously. For added security, users can also authenticate using PIC codes, PIN codes, and smartcards. Give authentication capabilities to up to a million users, and define which functions require authentication.

Secure print jobs and devices—Use HP Access Control Secure Authentication along with HP Access Control Intelligent Rights Management to set restrictions on devices and functionality, and to limit access to authorized users. Combine secure authentication with HP Access Control Secure Pull Printing to provide an easy way to retrieve jobs stored on a network server or the user's PC—even give mobile and remote employees the option to authenticate and release output with a mobile device, using HP Access Control Mobile Release. Authentication applies to fax, email, copy, and print jobs, and many other MFP functions.

HP Access Control Secure Authentication

Control costs—Better manage imaging and printing expenses and environments. By using HP Access Control Secure Authentication with HP Access Control Intelligent Rights Management to control access to networked devices, you can limit who prints and what they print, helping conserve resources, reduce costs, and create efficiencies throughout the organization.

Use a variety of networked devices—Increase security by requiring user authentication for your fleet of printers and MFPs—jobs remain on any networked HP Access Control Secure Pull Printing-enabled device until accessed by the specific user—and even on select non-HP devices already in your fleet. Provide security controls for sending email directly from the MFP. Users simply authenticate, and then the email is pre-populated with the user's name and address.

HP at work

A health sciences company began implementing practices to streamline their resource-intensive printing and imaging environment. But some users had difficulty acclimating—they were reluctant to give up individual printers, and concerned about confidentiality when printing sensitive materials.

HP Access Control Secure Authentication successfully addressed their needs, enabling employees to retrieve their specific print job when they got to the printer through a simple PIN code, which helped ensure documents remained confidential. This helped the company increase

efficiencies while meeting security needs and applying company-wide print policies. Overall, the company consolidated from roughly 500 devices down to approximately 100.

Why HP?

HP is recognized as a global leader in document management solutions. We offer technical expertise, and reliable products and solution sets that include:

- Consulting services, including procurement, installation, management and support that can be customized to enhance your organization's effectiveness
- Powerful industry solutions to optimize your environment, improve the bottom line and help the planet

Get started

Contact your local HP representative to:

- Set up a workshop with HP to assess your specific needs
- Establish a plan to implement the best solution for today and into the future
- Identify an approach that can help you save money

¹ HP ePrint Enterprise requires HP ePrint Enterprise server software. App-based option requires Internet- and email-capable BlackBerry smartphone OS 4.5 or newer; iPhone® 3G or newer, iPad® and iPod Touch® (2nd gen) devices running iOS 4.2 or later; or Android® devices running version 2.1, 2.2, 2.3, with separately purchased wireless Internet service and the HP ePrint service app. Email-based option requires any email-capable device and authorized email address. Solution works with PCL5/6, PCL3, and PCL3GUI printers (HP and non-HP).

HP three-part approach

HP helps you better serve your customers by accelerating business processes, improving the flow and use of information, and reducing costs. Working together, we assess, deploy, and manage your imaging and printing system—tailoring it for where and when business happens.

Optimize infrastructure

Balance your total digital and hardcopy communication costs with your need for convenient user access and productivity.

Manage environment

Maintain end-to-end visibility and control of devices, content and workflows.

Improve workflow

Capture, connect, and communicate information with smart process automation and dynamic content personalization.
