

AUTHENTICATE WITH EASE TO SAFEGUARD PRINT JOBS AND DEVICES

What if you could...

Enhance the security of networked printers and MFPs by easily authenticating devices and users?

Provide users with a single authentication solution that supports a wide variety of proximity card protocols?

Offer mobile or remote workers access to the features they need?

Support corporate security and environmental polices?

HP Access Control Secure Authentication Solution

Your business faces the challenge of protecting and controlling your printing environment, and requires a solution that increases security without the worry of expensive, complicated implementation. Providing work teams with a secure and flexible way to access devices and printing jobs can help you restore control and reduce costs.

Help protect your networked imaging and printing devices with robust authentication features that integrate with existing network credentials, including LDAP and Active Directory. Use HP Access Control Secure Authentication to increase document security by requiring user authentication at the device.

Solution at a glance

Enable your business to stop sensitive documents from going unclaimed, and prevent unauthorized use of devices—all while providing local, mobile, and remote users with convenient authentication options. Securing imaging and printing devices is virtually seamless—HP Access Control Secure Authentication offers a variety of authentication options, including HP proximity card readers, alpha-numeric personal identification codes (PIC), personal identification number codes (PIN), and smartcards. Easily bring imaging and printing devices up to corporate security standards. Reduce costs and meet environmental goals by helping to eliminate the unwarranted use of devices.

Solution features

Authenticate with ease via a variety of options—Provide easy authentication directly at the device, using a single authentication solution. HP proximity card readers eliminate the hassles of using logins and long passwords, and can be programmed to read two proximity card protocols simultaneously. For added security, users can also authenticate using PIC codes, PIN codes, and smartcards. Give authentication capabilities to up to a million users, and define which functions require authentication.

Secure print jobs and devices—Use HP Access Control Secure Authentication along with HP Access Control Intelligent Rights Management to set restrictions on devices and functionality, and to limit access to authorized users. Combine secure authentication with HP Access Control Secure Pull Printing to provide an easy way to retrieve jobs stored on a network server or the users PC—even give mobile and remote employees the option to authenticate and release output with a mobile device, using HP Access Control Mobile Release. Authentication applies to fax, email, copy, and print jobs, and many other MFP functions.

HP at work

A health sciences company began implementing practices to streamline their resource-intensive printing and imaging environment. But some users had difficulty acclimating—they were reluctant to give up individual printers, and concerned about confidentiality when printing sensitive materials. HP Access Control Secure Authentication successfully addressed their needs, enabling employees to retrieve their specific print job when they got to the printer through a simple PIN code, which helped ensure documents remained confidential. This helped the company increase efficiencies while meeting security needs and applying company-wide print policies. Overall, the company consolidated from roughly 500 devices down to approximately 100.

Control costs—Better manage imaging and printing expenses and environments. By using HP Access Control Secure Authentication with HP Access Control Intelligent Rights Management to control access to networked devices, you can limit who prints and what they print, helping conserve resources, reduce costs, and create efficiencies throughout the organization.

Use a variety of networked devices—Increase security by requiring user authentication for your fleet of printers and MFPs—jobs remain on any networked HP Access Control Secure Pull Printing-enabled device until accessed by the specific user. Provide security controls for sending email directly from the MFP. Users simply authenticate, and then the email is pre-populated with the user’s name and address.

Why buy HP?

HP has the expertise to identify and integrate innovative solutions—for companies of any size—to help meet their complex business needs. As a global technology leader, HP offers financial stability and scale to improve IT value, enabling customers in major industries to become more cost-effective, efficient, secure, and sustainable.

Get started

Contact your local HP representative to:

- Set up a workshop with HP to assess your specific business needs.
- Establish a plan to implement the best solution for today and into the future.
- Identify an environmental approach that can help your company save money.

HP three-part approach

HP works with you to assess, deploy, and manage an imaging and printing environment tailored to meet your business needs, while helping you reduce costs, conserve resources, and simplify document-intensive processes.

Optimize infrastructure

HP can help you achieve a balance between your total cost of printing and your needs for user convenience and productivity.

Manage environment

Working together, HP can help you maintain your optimized infrastructure while improving business efficiency and tightening security.

Improve workflow

By streamlining your document-intensive processes, HP can help you deliver a more efficient environment for capturing, managing, and sharing information.
