

HP Integrated Lights-Out Portfolio

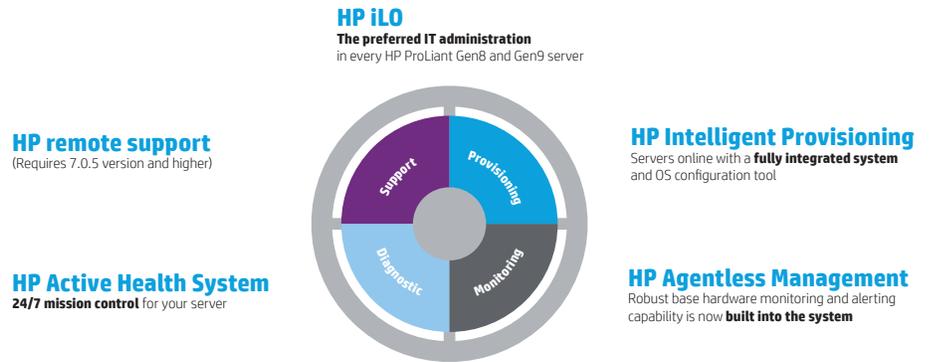

The preferred IT administrator for every HP ProLiant server

In today's data centers, life is harder than it should be. Server management tasks keep your administrators running from problem to problem. A typical workday may include a stream of error alerts, system events, installation, and update tasks, as well as multiple calls to the IT support desk. IT administrators spend a huge amount of time managing physical servers. But, what if you could streamline and execute these tasks from any location in the world, with just a Web browser or via your mobile devices?

You can reduce server administration time and tasks with the HP Integrated Lights-Out (iLO) management processor, which ships standard with every HP ProLiant server. Out of the box, HP iLO simplifies server setup, provides access to server health information, improves server power and thermal control, and enables basic remote administration.

HP ProLiant Gen8 and Gen9 servers and the broad HP iLO portfolio deliver an all-new, simplified IT administration experience, making the servers smart enough to manage themselves. Embedded inside each HP ProLiant Gen8 and Gen9 server is HP iLO Management to provide a rich set of capabilities that automate and simplify system provisioning, troubleshooting, and firmware and software updates.

Figure 1. HP iLO Management—Core lifecycle management functions built in for instant availability

With the HP iLO Management, you can automate your common tasks during each step of the IT lifecycle, from initial deployment to ongoing management and service alerting. The HP iLO Management delivers comprehensive embedded management through the entire lifecycle of the server, for every server in the environment. This translates to faster time to deployment, higher server and application availability through ongoing health monitoring, and significantly quicker time to resolution when issues arise.

Key features and benefits

The HP iLO Management portfolio includes:

HP Integrated Lights-Out (iLO)

The HP iLO management processor is the core foundation for the HP iLO portfolio. HP iLO management processors for HP ProLiant servers simplify server setup, engage in health monitoring of power and thermal control, and promote remote administration for every HP ProLiant server. HP iLO is the intelligence that drives and manages the server components and how they interact with each other.

With HP iLO 4, you can now have the same homogeneous server management experience across HP ProLiant Gen8 and Gen9 servers. Also, with the HP iLO Mobile App, you can access, deploy, and manage your server anytime from select smartphones and mobile devices in any location. Check it out at: hp.com/go/ilo/mobileapp

HP Intelligent Provisioning

Server provisioning and maintenance capability is now embedded and standard across HP ProLiant Gen8 and Gen9 servers. Exceeding its predecessor HP SmartStart in features, HP Intelligent Provisioning helps you take your server from an out-of-box state to an in-production state, quickly and easily. The key benefit is that when this technology is embedded in each HP ProLiant server, you no longer have to insert and deal with any physical media.

With HP Intelligent Provisioning, you can deploy servers faster to overcome the complexity of server maintenance and deployment by:

- Providing step-by-step HP ProLiant server deployment assistance in a simple and consistent manner
- Simplifying system configuration with guided, profile-driven or scripted approaches for seamless integration with standard IT processes
- Recognizing automatically if the system software is out-of-date and downloading the latest update

HP Agentless Management

HP Agentless Management runs on HP iLO, independent of the OS and the main CPU. It offers robust basic server monitoring without the complexity of OS-based agents. The base hardware monitoring and alerting capabilities are built into the system (running on the HP iLO processor). They start working the moment a power cord and an Ethernet cable are connected to the server.

HP Active Health System

HP Active Health System (AHS), an essential component of HP iLO, monitors and records changes in the server hardware and system configuration. HP Active Health System provides essential information to speed problem diagnosis and deliver rapid resolution through the help of services and support when system failures occur. It also:

- Provides a consolidated diagnostic mechanism without impacting performance
- Monitors more than 1,600 system parameters to help you start problem analysis faster and spend less time with support, reproducing or describing errors¹
- Raises the bar on quality and customer experience, with easy export and upload of data collected by Active Health to HP Service and Support for accurate and rapid problem resolution

With embedded alerting in HP iLO 4, SNMP alerts can be generated without the need for agents running in the OS. The active management software (AMS) running in the OS environment can be optionally installed to provide HP iLO with additional information from the OS for more accurate problem diagnosis.

HP remote support

HP remote support tools monitor your servers 24x7 and proactively alert you to potential problems. The tools work in conjunction with HP iLO 4, HP Active Health System, and HP Agentless Management for much easier configuration and setup of remote support for HP ProLiant Gen8 and Gen9 servers. Tools such as HP Insight Remote Support and HP Insight Online direct connect offer automated event detection, support case creation, notification, and accurate diagnostics, so you can spend less time solving problems and focus more on IT value-add to your business.

Embedded alerting and embedded remote support are part of HP iLO 4 in HP ProLiant Gen8 and Gen9 platforms. With embedded remote support, HP iLO transmits hardware service events via a secure encrypted connection for analysis by HP. A support case is generated if needed. Support cases are then sent to HP support staff or HP Authorized Partners for appropriate action. This is done automatically without user intervention, saving you time and resources. Licensed product offerings

HP Integrated Lights-Out Essentials license—Just Right IT for small- to medium-sized businesses

HP iLO Essentials is a license that offers remote server management uniquely designed for small and medium business servers, delivering more value for your investment. Offered on HP ProLiant Gen8 e-Series and Gen9 100 Series and below servers, the license provides full remote management access via the Integrated Remote Console (IRC), virtual media, email-based alerts, and iLO Federation discovery. HP iLO Essentials is the key to unlocking remote server management that can save you time and money, increase efficiency, and accelerate time to resolution. For more information, visit: hp.com/go/iLO/essentials

¹ HP proprietary internal test, July 2012.

HP Integrated Lights-Out Scale-Out license—Purpose-built for HPC

The HP iLO Scale-Out is a new license built for Web hosting, cloud service providers, and high-performance computing data centers, managing massive scale -out environments. HP iLO Scale-Out is offered on HP ProLiant Gen8 DL160, as well as HP ProLiant Gen8 and Gen9 SL servers. This license provides fast remote access via sophisticated scripting tools, lower operational cost with HP Dynamic Power Capping, faster time to resolution with iLO Federation management and proactive notifications, and an overall increase in data center efficiency. HP iLO Scale-Out is a hassle-free, intelligent server management solution for the world's extreme data centers. For more information, visit: hp.com/go/iLO/scale-out

HP Integrated Lights-Out Advanced license—Smart remote management

HP iLO Advanced and HP iLO Advanced for HP BladeSystem offer smart remote functionality without compromise, for HP ProLiant servers. The license includes the full integrated remote console, virtual keyboard, video, and mouse (KVM), multi-user collaboration, console record and replay, and GUI-based and scripted virtual media and virtual folders. You can also activate the enhanced security and power management functionality. With this license, your IT managers can perform system administration tasks without physically visiting their servers and manage servers at scale with iLO Federation. iLO Federation management features offer:

- Group Firmware Update gives you the ability to update the firmware of multiple servers
- Group Virtual Media gives you the ability to replicate same script media within an iLO Federation group
- Group Power Control lets you turn several servers on and off with a single click
- Group Power Capping allows servers to share power consumption among a group of servers
- Group License Activation for faster implementation of iLO licenses

HP iLO and HP Insight Control or HP OneView—Better together

The integration of HP iLO Advanced and HP Insight Control or HP OneView gives you powerful capabilities that deliver the health monitoring, performance, multi-server deployment, energy efficiency, and precise control needed to build your server infrastructure. For more information on how to purchase, visit: hp.com/go/insightcontrol or hp.com/go/oneview

HP Integrated Lights-Out feature comparison tables

HP iLO licenses can be purchased stand-alone or with your HP ProLiant server order. When ordering a license, please check the HP iLO comparison tables listed below for features specific to the HP iLO version (iLO 3 or iLO 4) within your HP ProLiant server.

HP iLO 3 Licensed vs. HP iLO 3 Standard

Feature	HP iLO Standard	HP iLO Standard for BladeSystem	HP iLO Advanced	HP iLO Advanced for BladeSystem
Platform support	All (except BL)	BL and WS	All (except BL)	BL and WS
Embedded health system	✓	✓	✓	✓
Virtual power buttons	✓	✓	✓	✓
IPMI over LAN/DCMI	✓	✓	✓	✓
Web-based GUI	✓	✓	✓	✓

HP Services

HP Financial Services provides innovative financing and financial asset management programs to help you acquire, manage, and ultimately retire your HP solutions. For more information visit: hp.com/go/hpfinancialservices.

For ordering information, see the [QuickSpecs](#).

To make more out of HP iLO 4, you need a service partner who thoroughly understands your IT environment. HP Services has unique insight and provides a wide range of support services to help you get more from your technology.

- One- or three-year 24x7 HP Software Technical and Software Update Service is bundled with HP iLO licenses. With this service, you gain rapid access to the HP call center and backline support, as well as proactive notification and firmware updates.
- If you are running business-critical environments, we offer HP Proactive Care. This service helps you deliver high levels of application availability through proactive service management.
