## Executive summary

This paper presents an HP StorageWorks Enterprise Backup Solution (EBS) technical blueprint for building entry-level Storage Area Network (SAN) backup solutions. Using this blueprint, customers can consolidate their distributed backup devices into a shared, centrally managed data protection solution that provides more efficient use of their tape resources. Management of your data protection resources can be done system wide from a single console. In addition, consolidation allows easier and more efficient tape backup procedures. As a result, customers realize reduced IT administration expense and higher system availability.

This blueprint includes the EBS design rules and presents an example EBS with a logical view, a physical view, and a bill of materials. Specifications are supplied for the EBS components. A discussion of scaling the Entry-level Enterprise Backup Solution is also provided.

Blueprints are enablers to build HP SAN solutions. These solutions provide storage that is easy to manage and grow while reducing a customer's total cost of ownership. Figure 1 presents a logical view of the Entry-level Enterprise Backup Solution. An additional technical blueprint is available to build a HP tested and supported heterogeneous Enterprise Backup Solution. Visit [www.hp.com/go/ebs](http://www.hp.com/go/ebs) for a list of all blueprints.

**Figure1.** Entry-level SAN Solution Logical View

## Business needs

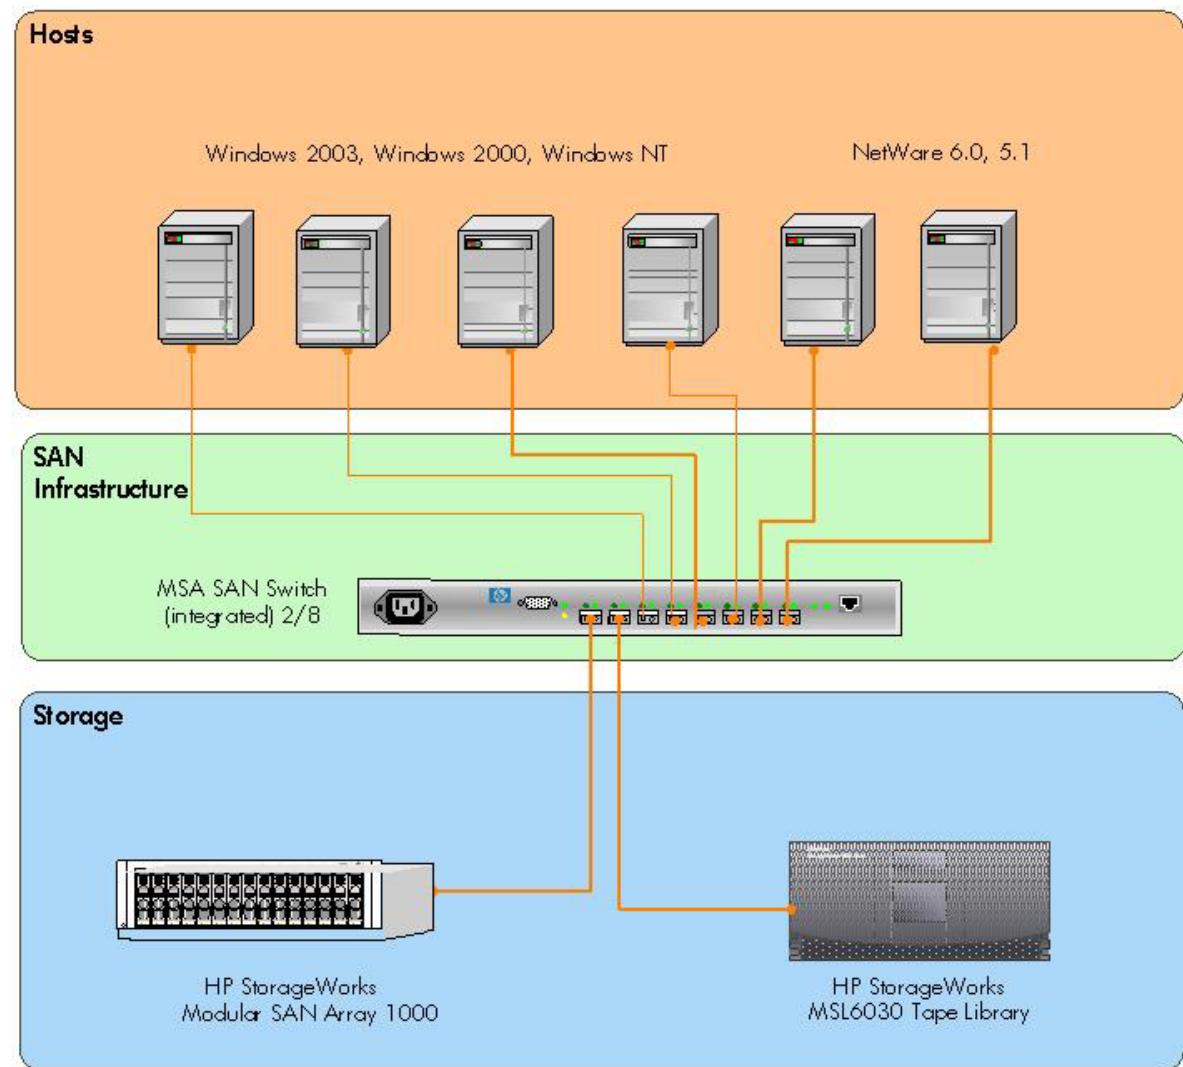

Servers with directly attached tape drives have proven to be difficult to manage in a cost-effective way. Businesses often face the need to reassign tape drives to be able to respond to unpredictable storage demands to avoid business disruption. IT administrators are challenged to manage the backup requirements of each individual server and application. Adding additional tape drives often requires taking servers offline, decreasing the availability of applications and data to the end users. An HP StorageWorks Enterprise Backup Solution can help customers solve their data protection problems in an efficient and cost-effective way.

EBS provides customers with:

- Improved utilization of tape drives in tape libraries, minimizing the need to maintain surplus tape drives to meet unexpected demand, thereby lowering the overall cost of data protection.
- Capacity that can be expanded quickly and easily, providing additional capacity where and when it is needed, without disrupting business activity.
- A central pool of tape storage that can be managed from a single console, reducing the demand for IT resources.
- Increased data access as multiple hosts can access and share tape libraries.

## Solution design and design rules

The example Enterprise Backup Solution illustrated in this blueprint can be modified to meet specific customer needs. To provide flexibility, the following assumptions and design rules can be revised as necessary. This information is intended as a guide in configuring a specific SAN backup solution to meet customer data protection requirements.

## Assumptions

The following section details underlying assumptions and design rules that can be modified to address specific customer requirements. This information is provided as a guide in configuring this specific Entry-Level Enterprise Backup Solution.

### Array

- MSA1000 arrays are fully loaded (that is, 14 drives).
- Disk capacities are calculated with the MSA1000 arrays in Autoraid mode with one hot spare.

## Tape

- Incremental backups occur six days a week.
- Full backups occur on the seventh day.
- A full backup of the entire SAN takes no more than eight hours.

## Fibre Channel Infrastructure

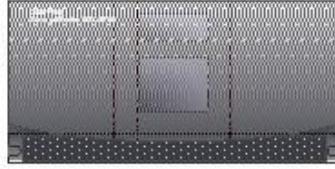

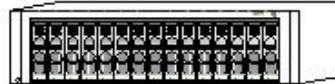

- The SAN configuration conforms to HP SAN guidelines.
- For more information, consult the *SAN Design Guide* referenced in "[HP StorageWorks EBS components](#)."

## Design rules

- The Enterprise Backup Solution can accommodate multiple hosts of any of the supported types (refer to the "[Hosts](#)" section).
- Two Fibre Channel switch ports are used for the MSA1000, and the MSL6030 Tape Library.
- If using 36-GB drives in the MSA1000 (.5TB), HP recommends a one-drive MSL6030 Tape Library.
  - Usable capacity: about 340 GB
  - Required number of Ultrium cartridges: two
- If using 73-GB drives in the MSA1000 (1 TB), HP recommends a one-drive MSL6030 Tape Library.
  - Usable capacity: about 695 GB
  - Required number of Ultrium cartridges: four
- If using 146-GB drives in the MSA1000 (2 TB), HP recommends a two-drive MSL6030 Tape Library. This is the configuration used in the example SAN solution.
  - Usable capacity: about 1360 GB
  - Required number of Ultrium cartridges: seven

|  | Windows Server 2003 (32 bit) | Windows 2000 Advanced Server | Windows NT 4.0 Server | Red Hat Advanced Server 2.1 |
| HBA  | FCA2101                      | FCA2101                      | FCA2101               | FCA2214                     |
| <b>Note :</b> Shaded areas represent hardware used in the example technical blueprint configuration. |                              |                              |                       |                             |

## Interconnect

| SAN Fibre Channel Infrastructure  |                                    |                                   |                                    |
|---|------------------------------------|-----------------------------------|------------------------------------|
| Features  | HP StorageWorks MSA SAN Switch 2/8 | HP StorageWorks SAN Switch 2/8 EL | HP StorageWorks SAN Switch 2/16 EL |
| Number of ports   | 8                                  | 8                                 | 16                                 |
| Per port line speed   | 1.0625/2.125 Gb/s, full duplex     | 1.0625/2.125 Gb/s, full duplex    | 1.0625/2.125 Gb/s, full duplex     |
| <b>Note 1:</b> Shaded areas represent hardware used in the example technical blueprint configuration. |                                    |                                   |                                    |
| <b>Note 2:</b> Extended Fabric license and Remote Switch license not required.                        |                                    |                                   |                                    |

## Tape storage

| StorageWorks Tape Libraries   |  |                                  |          |
|---|--|----------------------------------|----------|
| Features  | MSL6030 Ultrium 460 Tape Library       | MSL6060 Ultrium 460 Tape Library |          |
| Number of drives  | 1                                      | 2                                | 2        |
| Number of slots   | 30                                     |                                  | 60       |
| Max native storage  | 6 TB                                   |                                  | 12 TB    |
| Max native data transfer rate   | 60 MBps                                |                                  | 120 MBps |
| FC-SCSI Router  | e1200-160 Fibre Channel Interface Card |                                  |          |
| <b>Note:</b> Shaded areas represent hardware used in example technical blueprint configuration. |  |                                  |          |

## Disk storage

| StorageWorks array systems                               |                         |                         |                         |                          |
|--|-------------------------|-------------------------|-------------------------|--------------------------|
| Features   | MSA1000<br>18-GB drives | MSA1000<br>36-GB drives | MSA1000<br>73-GB drives | MSA1000<br>146-GB drives |
| Number of drives   | 14                      | 14                      | 14                      | 14                       |
| Usable capacity<br>with HP AutoRaid<br>and one hot spare | 171 GB                  | 340 GB                  | 695 GB                  | 1360 GB                  |
| Raw capacity   | 252 GB                  | 504 GB                  | 1022 GB                 | 2044 GB                  |

**Note:** Shaded areas represent hardware used in example technical blueprint configuration.

## Backup software

| Backup software components                          |  |                     |   |
|---|--|---------------------|---|
| Software name                                       | Quantity   | Required / optional | Description   |
| HP OpenView Storage Data Protector 5.1 Cell Manager | 1 x system   | Required            | Provides data protection through automated backups  |
| Drive Extension LTU                                 | Total number of tape drives in library   | Required            | License to use (LTU) tape drives in tape library  |
| Online Backup LTU                                   | 1 x system   | Optional            | Enables online backups with major databases and applications, including Oracle, SAP, Exchange, Informix, and more |
| Manager of Managers LTU                             | 1 x system   | Optional            | Ideal for centralized management of remote offices. Enables library sharing between Data Protector cells          |
| Windows Open File Backup LTU                        | 1 x server or<br>1 x 10 servers or<br>1 x 5 workstations or<br>1 x enterprise server | Optional            | Backs up open Windows and Netware files to ensure all files get backed up without downtime                        |
| Zero Downtime Backup LTU                            | 1 x TB   | Optional            | Online backup utilizing array replication and backup server to isolate application server from backup process     |
| Direct Backup LTU                                   | 1 x TB   | Optional            | Enables serverless backup from disk array to tape library   |
| Instant Recovery LTU                                | 1 x TB   | Optional            | Enables image to be recovered in seconds from disk  |
| Library LTU   | 1 x 61-250 slots<br>1 x unlimited slots  | Optional            | Supports tape libraries with greater than 60 slots  |

**Note:** Shaded areas represent software used in example technical blueprint configuration.

## Solution value

HP provides a tested and supported end-to-end solution built with world-class components, supported by a single point of contact—HP. With a service and support organization of over 30,000 professionals in 120 countries around the world, HP offers customers the peace of mind that comes from knowing that their solution works right now and can expand into their future with them.

HP tape libraries and HP OpenView Storage Data Protector software provide a secure and manageable solution enabling optimal customer data protection. Storage Data Protector provides backup protection for data in heterogeneous environments with minimal impact on system performance and application availability. Storage Data Protector is based on a modular design, so it is scalable with a customer's infrastructure to provide highly reliable and cost-effective backup in systems of any size. For customers who have standardized on a third-party backup application, HP has certified ISV backup applications providing investment protection for customers.

## Scaling-growth-flexibility

The Entry-level Enterprise Backup Solution example provided in this technical blueprint also can scale over time to meet customer requirements. By adding an additional or larger HP Fibre Channel switch, the example EBS can be grown to support additional hosts, storage arrays, and tape libraries. For specific guidelines on selecting the appropriate components, refer to the *EBS Design Guide* referenced in the "[HP StorageWorks EBS components](#)" section.

If there is a need for higher storage capacity, multiple MSA1000 storage arrays can be added. This also would likely require an additional Fibre Channel switch, or a switch with a higher port count, such as the HP StorageWorks SAN Switch 2/16-EL.

With additional storage, a larger backup capacity may be needed. See "[Design rules](#)" for more information or consult the *EBS Design Guide* referenced in "[HP StorageWorks EBS components](#)."

## How can I enhance my support options?

### Consulting and Integration Services

- Architectural blueprint services
  - Business continuity
- Storage solution services
  - Data replication solution service
  - SAN solution service
  - Backup and recovery solution service

For details, contact your HP sales representative or visit [www.hp.com/hps/storage](http://www.hp.com/hps/storage). For descriptions of additional HP support offerings, refer to the "[HP services](#)" section.

## Solution configuration

The following table lists a bill of materials (BOM) representing the major hardware and software used in the example solution in this blueprint. Required cables and other necessary items have not been included. For assistance, contact your HP sales representative.

## For more information

To get answers to further solution implementation questions, contact your HP sales representative, who will consult our regularly updated interoperability matrices and provide guidance on additional operating system, fabric topology, and third-party/legacy device interoperability.

### HP Storage solutions

To learn more about HP Storage solutions, contact your local HP sales representative or visit our Web site at <http://www.hp.com/go/storagesolutions>.

For additional HP Storage technical blueprints, visit [www.hp.com/go/hpstorage\\_blueprints](http://www.hp.com/go/hpstorage_blueprints).

### HP StorageWorks EBS components

For further information on the individual components in an HP Enterprise Backup Solution, visit [www.hp.com/go/ebs](http://www.hp.com/go/ebs), and select "EBS Design Guide" from the "technical documentation" section.

For information on HP SANs, reference the HP SAN Design Guide at <http://h18006.www1.hp.com/products/storageworks/san/documentation.html>

### HP services

HP offers a full range of storage services, including design, integration, data migration, and support services, and services to help you evolve your SAN as your needs change. For details, contact your HP sales representative or visit [www.hp.com/hps/storage](http://www.hp.com/hps/storage).

#### **Data migration services**

HP offers end-to-end management of the entire data migration process, allowing stress-free data migration from mission-critical HP-UX, Windows NT/Windows 2000, SUN legacy, and EMC storage systems to the HP StorageWorks SAN platform.

#### **Operate and evolve services**

HP operate and evolve services range from reactive hardware and software support (8 x 5 next-business-day response to 24 x 7 same-day response with six-hour call-to-restoration commitments) to comprehensive, proactive mission-sensitive and mission-critical environment support. To help you evolve your storage environment, HP will analyze your storage environment and provide detailed recommendations on how to tune performance and optimize capacity.
