High performance for business

- Based on HP internal testings, HP B1J 2800 prints at comparable speed to Canon B1J 2300 on simple color and black text.
- HP shows better PQ than Canon B1J 2300 with better skin tone and sharper image while Canon's printout seems to have lost some of the fine details.

More robust for shared use

- HP's high capacity individual ink HP has a high duty cycle which is not specified in Canon's unit.
- Unlike Canon, HP supports automatic duplexing which is not available in Canon's unit.
- For networkability, HP supports PDL, PS3, printer management software for Webjet Admin and Embedded Web Server while Canon's printer language is GARO, which is host based.
- Besides Windows and MAC, HP B1J 2800 supports UNIX and LINUX which is not supported by Canon's unit.

Footnote:

1. The PQ comparison is from HP internal testing using a standard test suite of files optimized for photo mode.
