BEN MERGEN, MECHANICAL ENGINEER

As a Mechanical Engineer with 15+ years of experience, Ben has designed custom automation tooling, assembly line tooling and worked in new product development. His product development experience includes designing complex, high-volume plastic injection molded parts for the medical and consumer electronics industries. Ben thrives on tackling the unique and challenging problems that arise in complex designs, and the interface with engineers and systems in the process.

Designing often requires collaboration with tooling experts, materials experts and molders to arrive at robust solutions. Experience has taught Ben that upfront development and design efforts are worthwhile because they save time, money and future problems.

When Ben is not solving complex engineering problems at **SIGMADESIGN**, he enjoys spending time with family, windsurfing and “tractoring” around his home.

ABOUT **SIGMADESIGN**

SIGMADESIGN, a product design and engineering firm headquartered in Vancouver, WA, offers professional services that support projects from concept through production. **SIGMADESIGN** provides turnkey solutions for projects through **solid** engineering, broad experience, and focused execution.

The firm was founded in 1994 to serve product design needs of the US Pacific Northwest. With our growth including an office in Singapore, and a manufacturing facility in Vancouver, Washington, we serve a world-wide client base. Our expertise and services can take an idea from concept through production. We assist at any stage in the process.
