

A PRESCRIPTION FOR MORE EFFICIENT, COST-EFFECTIVE PHARMACIES

HP Printing Solutions for Healthcare—Pharmacy

Accelerate the process of fulfilling prescriptions, reduce costs and improve security with HP LaserJet printers and the TROY SecureRx or TROY Secure Document (SDP) printing solutions. You can print prescriptions on plain paper. HP printing solutions can help you streamline and accelerate the business of healthcare, so you can spend more time with your patients and less time on administrative chores. HP leads the pack in understanding, engineering and supporting hospitals and medical practices around the world.

What if you could...

Cut the cost of prescription printing by using plain paper versus expensive preprinted prescription paper?

Improve workflow with legible printed prescriptions that reduce calls from pharmacist to physician?

Provide secure prescriptions, reducing the risk of fraud?

Offer easily recognizable security features on the prescription to assist pharmacists with verification and to warn against prescription counterfeiting?

SOLUTIONS AT A GLANCE

The HP TROY SecureRx and TROY SDP printing solutions offer a practical alternative to costly pre-printed prescription forms. This solution allows you to print prescriptions on plain paper. Powered by a select choice of HP printers and multifunction printers (MFPs), the solution is easy to deploy and use and offers a rapid return on your investment.

Here's an overview of HP and TROY printing solutions features:

SUPPORT STATEMENT

Copy-evident features—A copy-void pantograph and customizable microprint font help prevent unauthorized copying.

Anti-alteration feature—Variable print displays user-selected information across the prescription to help verify that it has not been altered.

Electronic medical record system (EMRS)-generated feature—The variable-print feature displays special EMRS characters to help prevent erasure or modification.

Security features description—A printed warning box describes the in-use security features and serves as an additional anti-counterfeiting measure.

1. The physician enters the required prescription information and sends the prescription to the HP printer.

2. The EMRS processes the prescription, adding the prescription data to the patient's information and storing the updated file.

3. The HP and TROY SecureRx Printing Solution reads the incoming prescription data stream, applies the security features and prints the CMS-compliant prescription.
