**ODMA81:**

HP DMA 8.1 delivers additional improvements to the DMA capabilities, including Smart Message Mapping customization and simulation, new automation facilities during synchronization, and new synchronization package development tools. Additionally, HP DMA can now be used with PA-RISC systems in a remote configuration (with DMA running on a Microsoft Windows system) as described in the release notes and installation guides. HP DMA 8.1 replaces DMA 8.0. The OpenVMS HTTPS Agent delivers the HTTPS-compliant version of the OpenVMS agent for the first time for use with OMU.

**More information and assistance**

For questions about this upgrade, customers working with an HP OpenView Services Integrator (SVI) partner should contact their representative. Otherwise, please consult the HP OpenView knowledge base at:  
[www.hp.com/managementsoftware/services](http://www.hp.com/managementsoftware/services).

In case you do not find an answer or solution in the knowledgebase, we suggest that you submit a support call - [www.hp.com/managementsoftware/submit\\_call](http://www.hp.com/managementsoftware/submit_call) - for assistance.
