

All requests for OFMV91 must be received by January 30, 2005

The Open File Backup version 9.1 includes several new features based on requests and suggestions from customers like you. Improvements include:

- Support for Windows Server 2003 including the support for the Microsoft® Windows® Server 2003 Volume Shadow Copy Service for system wide synchronization for all files, including those that are non-VSS compliant. Open File Backup 9.1 also enhances the VSS framework by providing support for the non-VSS applications
- Support for NetWare 6.5
- Optional NetBIOS connection and communication
- Evolution from "File-System" to "Disk-Level" Technology to eliminate the interoperability issues with anti-virus software, disk defragmentation and encryption utilities

If you have any questions, please do not hesitate to contact your local HP sales office or HP reseller.
