

IMPORTANT: All requests must be received by May 3rd, 2006 for customers with valid software support contracts.

This notification is to inform you of the availability of the software OV Storage Mirroring 4.4.1 (SMU441).

To help you decide to request your entitlement/s we encourage you to read this releases information on the following pages.

HP OpenView Storage Mirroring v4.4.1

New features in this release of OpenView Storage Mirroring v4.4.1 include:

- ICMP-less Failover - Allows failover monitoring when ICMP ports are blocked
- Server groups in the MMC - Allows servers to be grouped in Management Console
- No re-mirror on target reboot

This release of Storage Mirroring also incorporates the most recent hot fixes which are:

- 4.3.3.9 - multiple fixes: Receiving Error messages X2T failed: Skipping file <filename> AND changing target drive letter doesn't result in error
- 4.4.0.4 - TSM runs slower when Storage Mirroring is installed
- 4.4.0.5 - Email notification doesn't work on Japanese Windows 2003
- 4.4.0.6 - Replication status goes into a state of 'pending' or 'ready' after reboot despite replication being disabled
- 4.4.0.7 - Storage Mirroring silent upgrade
- 4.4.0.8 - File corruption when saving word documents when using wildcards in repset rules.
- 4.4.0.9 - Dr. Watson while mirroring a locked file on a volume mount point.
- 4.4.0.11 - v4.4 based hotfix to address the deadlock issue with scheduler
