

EMS Future Direction

September 2010

EMS Framework and Monitors

Currently supported versions

- EMS has been deprecated. EMS Framework and Monitors will continue to ship in HP-UX 11i v3.
 - Post HP-UX 11i v3 release, EMS will be replaced with Web-based Enterprise Management (WBEM) based solution
- The latest version of EMS on each of the OS Releases as of April 2008 are listed below:

Version	OS	Introduced	End of support
A.04.20.11	HP-UX 11i v1	Sep 2008	HP-UX 11i v1 end of life
A.04.20.23	HP-UX 11i v2	Sep 2008	HP-UX 11i v2 end of life
A.04.20.31	HP-UX 11i v3	Sep 2008	HP-UX 11i v3 end of life

EMS Framework and Monitors

Future Direction

- EMS Framework (EventMonitoring) and HA Monitors (B5736DA) are in support mode for all releases of HP-UX 11i
 - No new enhancements/features
 - Only defects with severity above 8 or defects related to security issues would be fixed.
 - **There would be no patches for any release of EMS.**
 - As and when required EMS will provide defect fixes via AR / OEUR media. In case of critical defects in the EMS Framework (EventMonitoring bundle only), that impair the system / dependent product functioning, the fix will be made available via Web Release, which happens once every month. The fix would be made available for download as an installable product upgrade via the web site <https://h20392.www2.hp.com/portal/swdepot/try.do?productNumber=EventMonitoring>
 - These fixes would be included in the EMS product on the AR/OEUR media at a minimum of once each year.
- In the support mode no new EMS Monitors will be developed.
- EMS Developers Kit will no longer be shipped.
- Monitoring for new platforms will be accomplished through WBEM based monitoring only using the SysFaultMgmt Product.
- Customers are encouraged to develop WBEM provider based monitors using the SysFaultMgmt framework rather than developing EMS monitors.
