

HP Output Management Solutions

Streamlining the flow of critical business content for innovation, collaboration, and cost management in the aerospace industry

Is your company battling an unwieldy output infrastructure that is too inefficient and unreliable for today's demanding business environment? If so, it is probably consuming too many resources to manage and operate. Effective output management fosters product and process innovation, improves supply chain and customer service collaboration, and supports aircraft maintenance, repair, and overhaul (MRO) management efforts. An HP Output Management solution can help your company deliver critical business content from almost any source to any destination reliably, efficiently, and cost-effectively.

Is document flow impacting your business?

Perhaps you have asked yourself some of these questions:

- How can I more easily and cost-effectively update and revise manuals and other documents with constantly changing part numbers?
- Is my current output infrastructure the result of a comprehensive plan or was it built up slowly on an ad hoc basis?
- Do I have end-to-end visibility of my distributed output environment?
- How can I manage the environment more effectively and efficiently, and with the fewest people?
- Does information move smoothly through our supply chain, across borders, and in multiple alphabets and languages?
- How many calls to the help desk are related to lost or delayed output?

Optimize infrastructure

An HP Output Management solution can untangle and simplify your output infrastructure. It acts as an intelligent link between your applications and your output devices.

On the input side, you can connect applications from different platforms and different locations into a single, centrally-located system. On the output side, you can connect to almost any device, including printers, fax, email, FTP, web, and file.

The HP Output Management solution takes charge of moving documents from user to user, tracking and logging, bursting and re-bundling reports, and much more. You get exceptional output reliability, an auditable delivery trail, and a single location from which to view and manage your output processes and infrastructure.

Protect your revenue stream

The reliable and efficient flow of documents translates into stable and often increased revenue and profit. In just one example, an aviation electronics company implemented an HP Output Management solution at their manufacturing plants, dramatically improving the delivery of their SAP-generated output and their overall shipping performance.

Reduce content delivery costs

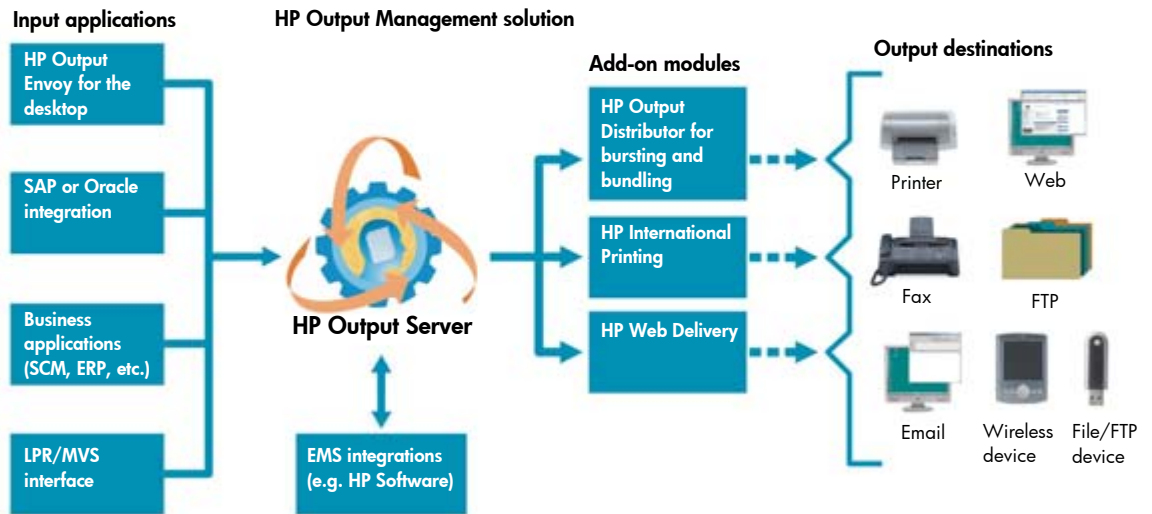

Centralized control enables you to cut output costs across the infrastructure in a variety of ways, including being able to upgrade the entire organization in a single software-based step and printing in any language, using any alphabet, anywhere.

A survey of large HP customers who rely heavily on communication and reporting has documented 3-year ROIs of nearly 400 percent.¹

¹ Alinean, April 2007, [HP Output Management: The value of guaranteed delivery](#)

The HP Output Management solution is built to handle business-critical documents in high-volumes—with industry-leading reliability and cost-effectiveness.

The HP Output Management solution provides reliable information delivery across the enterprise

Reliable, efficient, and cost-effective

An HP Output Management solution is a combination of information delivery software and services including implementation, integration, software support, and customer training. We tailor this solution to help you innovate how your company manages, shares, and distributes information.

Now you can increase collaboration within your business ecosystem of employees, partners, and customers without compromising security. The HP Output Management solution delivers business-critical information in many formats to virtually any destination reliably, efficiently, and cost-effectively.

- **Reliable**—Reduce the loss or delay of revenue with reliable delivery of business-critical documents.
- **Efficient**—Accelerate business-cycle time by streamlining event-driven and time-sensitive workflows, as well as job-level process management with enterprise and systems management applications.
- **Cost-effective**—Reduce costs through improved management and tracking of business information delivery from a single interface regardless of destination type or location.

HP partners with SAP and Oracle® to help drive your success

While some aerospace companies use Oracle applications to run their business, SAP continues to be the de facto business operating environment for much of the aerospace industry. The ongoing collaboration between HP and SAP, as well as between HP and Oracle, focuses on supporting improved decision-making through better access to business information.

No customization of the SAP or Oracle application environments is required. With an HP Output Management solution, you can immediately begin delivery of critical information directly from SAP or Oracle applications to internal and external destinations with end-to-end tracking and proactive central management of all information delivery.
