Wolf Pro Security for Small and Mid-Sized Organizations (SMB/SME)

Easy to deploy, cost effective solution filling your security gaps

Solution Benefits

HELP REDUCE COSTS
- No need to purchase expensive multi-vendor security solutions

HELP LOWER RISKS
- Secure PCs and prevent lateral spread of malware

SIMPLIFIED MANAGEMENT
- Streamlined deployment and management without the need of a security specialist

DOES NOT IMPACT END USER WORKFLOW
- Ease of use by your company employees

FILLS SECURITY GAPS
- Provides added layer of security, capturing threats that other solutions may miss (e.g., antivirus)
- Wolf Pro Security includes HP Next Gen Antivirus (NGAV)²
Overview

The news media makes us believe that data breaches only happen to large companies. But, in fact, cybercriminals regularly attack SMBs/SMEs, seeing their endpoints as easier targets that primarily rely on NGAV for protection. Without proper endpoint security, SMBs are seriously impacted if they are breached, affecting a company’s viability and competitiveness.

STATISTICS

| 88% of cyberattacks are targeted at small businesses | Small business employees experience 350% more social engineering attacks than larger enterprises | 60% of small businesses go out of business within 6 months after a cyberattack |

HP Wolf Pro Security

Wolf Pro Security (WPS) was developed to help SMBs/SMEs contain threats in a simple, easy to manage and deploy package. Using HP’s unique Endpoint Isolation technology, WPS protects PCs from Zero-Day, phishing, ransomware attacks, and other malware that traditional solutions can miss. Additionally, WPS includes an optional NGAV software to help you reduce costs.

HOW IT WORKS

- Uses hardware-enforced micro-virtualized machine (micro-VM) to protect each individual task
- Stops malware regardless of behaviour or identification and provides forensic visibility into the malware helping close the endpoint security gap

Conclusion

HP Wolf Pro Security’s Endpoint Isolation Technology is available on HP Wolf Pro Security Edition PCs or as a standalone solution for HP or non-HP Windows PCs, eliminating the need for complex endpoint security and saving you money by reducing:

- Employee downtime and service desk calls
- IT team’s time to manage multiple solutions
- The need to purchase additional antiviruses software
- Cost of hiring a security specialist to gain comprehensive protection
