

Work productively from any device

Chromebooks
boot up in

10 secs
or less

Running a business sometimes feels like a race against time. And when you're spending too long waiting on a software update or slow computer, even simple tasks can start to stack up. With ChromeOS, your IT will be as agile and flexible as you are – so you can stay productive no matter where you're working.

ChromeOS devices deliver **77%** more productive time than legacy or other devices.¹

What does this mean?

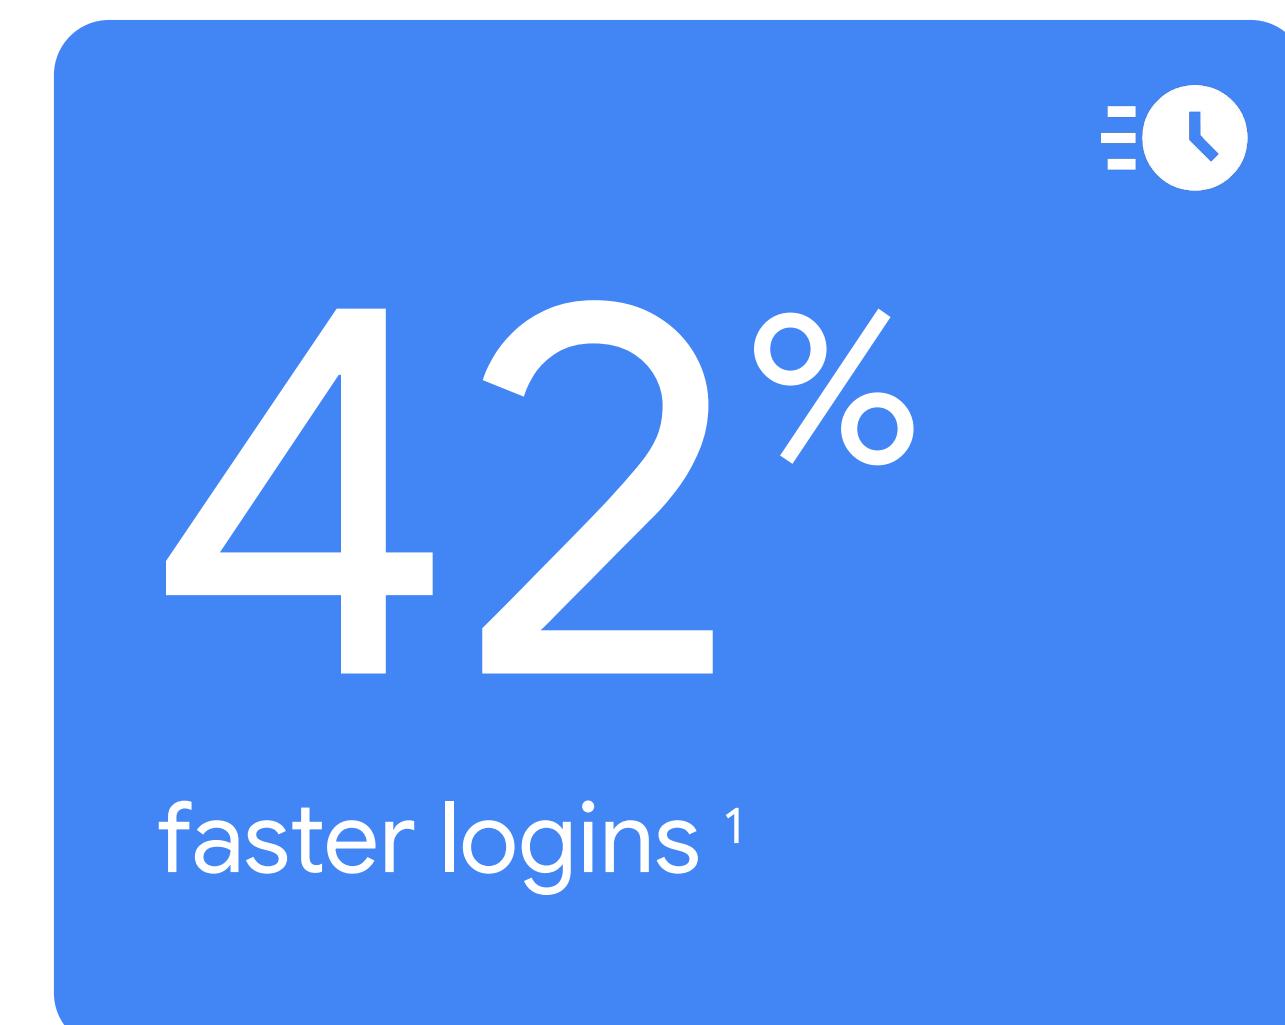

Because ChromeOS devices boot up in seconds, login fast, and require little upkeep, you get more minutes back in your day to tackle your to-do list.

- ✓ **Ready to go out of the box**, ChromeOS laptops and tablets also update unnoticed in the background and don't slow down over time. So you can avoid interruptions and delays and get to work faster.

Leave IT to ChromeOS

Work productively from any device

- ✓ **Access files and apps on any device.** Because data lives on the cloud by default, your workspace moves with you, and you can stay productive everywhere you go.
- ✓ **Auto-wipe all data and settings** every time a user logs out of their ChromeOS laptop or tablet to make it safe and simple for your employees and customers to share devices.

- ✓ **Provide your employees with productivity apps and tools** they already know how to use, like Gmail, Google Docs, and Google Sheets, as well as third-party apps such as Zoom and Slack.
- ✓ **Choose devices that suit your needs** from the diverse range of [ChromeOS laptops and tablets](#) available, or install ChromeOS on your PCs and Macs for free with [ChromeOS Flex](#). You can also use Chromeboxes and other devices to power kiosks and digital signage.

? **How do I manage and distribute our laptops and tablets?**

ChromeOS device management allows you to deploy, manage, and secure your devices from the familiar Google Admin console – alongside your apps, extensions, and Google Workspace.
